## Executive Summary

Nearly all colleges in the nation now accept both the SAT and ACT as admission examinations. Since 2004-2005, the new college entrance options have impacted participation and performance on both tests among high school graduates in Montgomery County Public Schools (MCPS). To assess the impact, the Office of Shared Accountability examined trends of SAT and ACT participation and performance for the MCPS graduating Classes of 2007 to 2011. The study also explored associations of graduates' college entrance test participation with their performance on the tests and their overall high school grade point averages (GPA). The following four research questions were examined:

1. What were the trends in MCPS graduates' participation on college entrance tests (SAT and ACT) for the Classes of 2007 to 2011?
2. What were the trends in MCPS graduates' performance on college entrance tests (SAT and ACT) for the Classes of 2007 to 2011?
3. How was MCPS graduates' performance on college entrance tests (SAT and ACT) associated with their test participation for the Classes of 2010 and 2011, after controlling for student demographic and special service variables?
4. What was the association of college entrance test participation with graduates' overall high school GPA for the MCPS Classes of 2010 and 2011?

## Summary of Methodology

The study population consisted of diploma students from MCPS Classes of 2007 to 2011 who graduated in June of the graduation year. Graduates' most recent (as of April of the graduation year for the SAT and June for the ACT) composite scores in college entrance tests were calculated from scores of subtests (i.e., Critical Reading, Writing, and Mathematics for the SAT, and Reading, English, Mathematics, and Science for the ACT). The highest possible composite score was 2400 for the SAT and 36 for the ACT. Graduates' overall GPAs (un-weighted) were categorized into a GPA of B or higher versus a GPA lower than a B. Descriptive (i.e., calculation of test participation rates and mean scores) as well as basic (i.e., $t$-test and chi-square test) and advanced (i.e., Analysis of Covariance) analyses were performed. Statistical significance and effect size were estimated for results if applicable.

## Summary of Findings

Research Question One. This study found a downward trend for SAT participation and an upward trend for ACT participation from the Class of 2007 to the Class of 2011.

## SAT

- The overall SAT participation rate decreased by 7.7 percentage points between the Classes of 2007 and 2011. The downward trend was more pronounced for graduates taking the SAT only (14.1 percentage points).
- Male and Female graduates experienced a similar five-year decrease in SAT participation.
- Graduates receiving special services had a larger five-year decrease in SAT participation.

ACT

- The overall ACT participation rate increased between the Classes of 2007 and 2011 by 11.9 percentage points for all ACT takers and 5.4 percentage points for ACT-only takers.
- Similar five-year increases in ACT participation rates also were found for gender and special services subgroups.
- The participation rate for ACT-only takers increased substantially for all graduates and for gender and special services groups across the years.

## ACT and SAT

- There was a relatively moderate increase in the participation rate ( 6.4 percentage points) among graduates taking both the ACT and SAT between the Classes of 2007 and 2011.
- Male graduates had a larger increase in dual participation rate than Female graduates over the time period.
- Graduates receiving Free and Reduced-price Meals System (FARMS) services doubled their dual participation rate and those receiving English for Speakers of Other Languages (ESOL) services increased their dual participation rate more than 10 times over the five years. There also was a small increase for the special education group.
- Across racial/ethnic groups, the rate of taking both the SAT and ACT increased between the Classes 2007 and 2009 but slightly decreased between the Classes of 2010 and 2011 with the exception of Asian test takers.

Research Question Two. Graduates' performances on college entrance tests showed an upward trend.

SAT

- The average SAT composite score significantly increased from 2007 to 2011 for all graduates ( 16 points), Male (18 points) and Female (16 points) graduates, and FARMS (57 points) and ESOL (94 points) groups for all SAT takers.
- There was a larger five-year increase among SAT-only takers for all graduates (26 points), Male ( 21 points) and Female ( 32 points) graduates, and FARMS ( 62 points) and ESOL (115 points) groups.

## ACT

- There was a one-point or less decrease over the five years in the average ACT composite score for all ACT takers and all female ACT takers, which was statistically significant.
- There was a significant one-point increase over the years for females taking ACT only.

## Research Question Three

- Graduates who took both the ACT and SAT significantly outperformed those who took the ACT only by about two points on the ACT composite score for the Classes of 2010 and 2011, after controlling for student demographic and special services variables. The significant result had a small effect size indicating an educational significance.
- Graduates who took both the ACT and SAT and those who took the SAT only showed comparable performances on the SAT, after controlling for student demographic and services variables.

## Research Question Four

- For the Classes of 2010 and 2011, graduates who took the ACT only tended to have lower high school GPAs than those who took the SAT only or both tests. Specifically, less than $40 \%$ of ACT-only takers received a B or a higher GPA, whereas more than one half of SAT-only takers and more than two thirds of dual-test takers earned a B or a higher GPA in both graduating classes.

## Recommendations

- Schools should use the college readiness monitoring tool to monitor and prepare students for both the ACT and SAT.
- The school district should consider providing emphasis on ACT performance similar to the SAT.
- As a follow-up study to this research, the college readiness M-STAT team should examine why there was a substantial increase in ACT-only participation in certain high schools.

# Participation and Performance Trends of College Admission Examinations in the Classes of 2007 to 2011 

Helen Wang, Ph.D, Vasuki Rethinam, Ph.D, and Marilyn Powell

## Background

Historically, a majority of Montgomery County Public Schools (MCPS) graduates have taken the SAT as part of their postsecondary preparation. However, with an increasing majority of the nation's colleges accepting both the SAT and ACT, or the ACT scores as an indicator of students' academic readiness for college (e.g., Boston College, 2009; Duke University, 2009), MCPS graduates began taking advantage of the new college entrance examination options. Since school year 2005, there have been significant increases in the number and percentage of MCPS graduates who took the ACT in addition to, or in lieu of, the SAT (Von Secker, 2009).

To examine whether this trend has continued, this study extended the prior analyses about participation and performance in college entrance tests in MCPS through more recent years. In particular, the study examined changes in SAT and ACT participation and performance in MCPS for the high school graduating Classes of 2007 through 2011. In addition, the study explored how test participation was associated with performance on the tests and with overall high school grade point averages (GPA) for the Classes of 2010 and 2011.

Findings from this study will help district and school leadership understand trends in SAT and ACT participation and performance, and understand differences among all graduates and subgroups of students defined by race/ethnicity and eligibility for special services. Additionally, the findings will provide further clarification to the decrease in SAT participation (Rethinam, 2011a).

## Literature Review

## The SAT

As the nation's most widely used standardized college admission test, the SAT has been proven to be a reliable, effective indicator/measure of a student's college readiness and success (College Board, 2012). Along with a student's academic record, SAT results reflect the subject matter learned by students in high school and how well they apply that knowledge-the critical thinking skills necessary to succeed in college. Wiley, Wyatt, \& Camara (2010), researchers at the College Board, identified a combined score of 1550 (rounded from 1556) on SAT reading, math, and writing as the college readiness indictor. They found that an SAT score of 1550 was associated with a $65 \%$ probability of obtaining a B- in first-year college courses.

SAT scores tend to vary across different student populations defined by cognitive and noncognitive factors strongly associated with educational experiences that influence average SAT scores (College Board, 2002). Even among students with similar high school records, there were long-standing national differences in the SAT scores of students who differ in demographic status, family background, level of parent education, or economic advantage (Burton, 2003; Camara \& Schmidt, 1999; Nettles, Millett, \& Ready, 2003).

## The ACT

The ACT is also a widely used curriculum- and standards-based educational and career planning tool that assesses students' academic readiness for college (ACT, 2012). ACT test scores reflect what students have learned throughout high school and provide colleges and universities with excellent information for recruiting, advising, placement, and retention.

The ACT's college readiness benchmarks are the minimum test scores required for students to have a high probability of success in credit-bearing first-year college courses-English composition, social sciences, college algebra, or biology (ACT, 2008a). Specifically, the benchmark scores provide a score at which students have a $50 \%$ chance to obtain a course grade of B or higher or about a $75 \%$ chance to obtain a C or higher in the corresponding course (ACT, 2008a). For example, a student who scores 18 on the ACT English test has a $50 \%$ chance of scoring B or higher, or a $75 \%$ chance of scoring C or higher, in a college English composition course.

## The SAT and ACT in MCPS

Previous MCPS research has examined trends in ACT and SAT participation and performance of graduates. ACT participation in MCPS increased from $15.3 \%$ in 2006 to $23.7 \%$ in 2008, whereas SAT participation slightly decreased over the time period (Von Secker, 2008). In 2008, 20.1\% of MCPS graduates took both the SAT and ACT, a percentage nearly double that of graduates in the Class of 2005 ; likewise, $3.6 \%$ of graduates in the Class of 2008 took the ACT only, a percentage more than four times that of the Class of 2005 (Von Secker, 2009). The continuing upward trend in ACT participation was demonstrated in 2011 with more than 3,000 MCPS graduates taking the ACT, comprising roughly $25 \%$ of the district's graduates (Rethinam, 2011b).

The SAT and ACT are the two most commonly used standardized college admission tests in the nation. MCPS uses scores of both tests to indicate students’ readiness for college-level work. MCPS identified a combined score of 1650 on the SAT (reading, writing, or mathematics) or a 24 on the ACT as one of the MCPS' Seven Keys to College and Career Readiness (Key 7) (Von Secker, 2009). Von Secker and Liu (2010) found that the MCPS Class of 2010 set a new record for the percentages of SAT test takers who attained 1650 or higher. Graduates who attain these scores are unlikely to be required to take remedial courses upon entry to a two- or four-year college (Von Secker, 2009). Another study on MCPS graduates (Zhao \& Liu, 2011) indicated that students meeting Key 7 were more likely to enroll in a two- or four-year college immediately in the fall after high school graduation.

## High School Grade Point Average

Geiser and Santelices (2007) found that GPA was consistently the best predictor not only of freshman grades in college, but of four-year cumulative college grades and graduation. Other studies also have shown that high school GPA is one predictor of postsecondary enrollment and postsecondary success (e.g., ACT, 2008b; Maryland State Commission on Higher Education, 1997). Thus, a combination of high school grades and SAT scores are best predictors of college grades (Zwick, 1999).

Roderick, Nagaoka, and Allensworth (2006) indicated that unweighted high school GPA, the number of honors and AP courses the students took, and eleventh grade achievement test scores are predictors of enrollment and graduation rates among students who enroll in a four-year college immediately after high school graduation. An unweighted high school GPA of 3.0 (B) was identified as a key benchmark of college readiness in their research that suggested this GPA level related to a $50 \%$ greater likelihood of graduation from a four-year institution (within six years).

## Methodology

## Research Questions

The following questions were examined:

1. What were the trends in MCPS graduates' participation of college entrance tests for the Classes of 2007 to 2011?
a. What were the trends in SAT participation among MCPS graduates by gender; race/ethnicity; and participation in Free and Reduced-price Meals System (FARMS), special education, and English for Speakers of Other Languages (ESOL) services?
b. What were the trends in ACT participation among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?
c. What were the trends in participation of both the ACT and SAT among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?
2. What were the trends in MCPS graduates' performance on college entrance tests for the Classes of 2007 to 2011?
a. What were the trends in SAT performance among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?
b. What were the trends in ACT performance among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?
3. How was MCPS graduates' performance on college entrance tests associated with their test participation for the Classes of 2010 and 2011?
a. Is there a difference in mean SAT scores between graduates who took both the ACT and SAT and those who took the SAT only, after controlling for graduates' demographic and special services variables?
b. Is there a difference in mean ACT scores between graduates who took both the ACT and SAT and those who took the ACT only, after controlling for graduates' demographic and special services variables?
4. What was the association of college entrance test participation with graduates' overall high school GPA for the MCPS Classes of 2010 and 2011?

## Study Population

The population for this study consisted of the MCPS high school graduating Classes of 2007 to 2011 and included only diploma students who graduated in June of 2007 to 2011. Students who graduated from MCPS during the summer or midyear and students who took a college entrance test but could not be verified as MCPS graduates were excluded from the analysis. All June graduates from the Classes of 2007 to 2011 were included in the analysis for question one; all college entrance test takers from the Class of 2007 to 2011 were included for question two; and all college entrance test takers from the Classes of 2010 and 2011 were included for questions three and four.

## Measures

College entrance test participation and performance. With both the SAT and ACT, high school students are allowed to take the test multiple times in order to achieve the most optimal score. For this study, the cut-off time point for the SAT was April of the graduation year. SAT participation was defined as receiving the SAT composite score (Critical Reading, Writing, and Mathematics). ACT participation was defined as receiving the ACT composite score (Reading, English, Math, and Science) with or without a Writing score for any ACT taken as of June of the graduation year. The SAT and ACT composite scores described in this report were students' most recent (as of April of the graduation year) test scores. The mean composite score was calculated from corresponding sections of each test described above. The highest possible composite score is 2400 for the SAT and 36 for the ACT.

General academic performance. Students' general academic performance was measured by overall high school GPA based on all credit-bearing courses a student took in high school. Both unweighted and weighted GPA are calculated in MCPS. Based on the study by Roderick, Nagaoka, and Allensworth (2006), this study used unweighted GPA ranging from 0 to 4, with A equal to 4 , B to 3 , C to 2 , D to 1 , and E to 0 . GPAs were collapsed into two categories: a GPA of $B$ or higher versus a GPA lower than B.

Demographics and special services. Data about graduates' gender, race/ethnicity, and Grade 12 participation in FARMS, special education, or ESOL services were taken from MCPS records. Gender and special services were coded into dichotomous variables ( 0 or 1) and race/ethnicity was a categorical variable. In the analysis for question three, White, Asian, and Two or More Races graduates were combined as a reference group for African American and Hispanic graduates, respectively.

## Data Analysis

Descriptive statistics using cross-tabulation were conducted to obtain numbers and percentages of June graduates who took the ACT, SAT, both tests, and either test only, as well as the mean test scores among test takers. The computation was conducted for each selected graduating class in order to show the change of test participation and performance across the cohorts. A t-test procedure was applied to examine the significance of the five-year change in the mean composite test scores. Data were disaggregated by student gender, race/ethnicity, and participation in FARMS, special education, and ESOL services.

Analysis of covariance (ANCOVA) compared differences in mean SAT scores of graduates taking both the SAT and ACT to those taking the SAT or ACT only for the Classes of 2010 and 2011. The ANCOVA procedure was used to test significant differences between adjusted group mean scores by statistically controlling for the effects of students' demographic and special services variables, and provide the adjusted group mean scores for calculating effect sizes of the group mean differences. The analysis employed one of the most common effect size measuresknown as Cohen's $d$ (adjusted mean difference/pooled test scores)-to assess how practically meaningful the adjusted group mean difference was (e.g., Cohen, 1988; Carver, 1993; Levin, 1993; Thompson, 1995; American Psychological Association, 2001). Within the education research field, an effect size of 0.2 is considered small but acceptable; at least 0.5 is considered medium; and 0.8 or greater is considered large (Cohen, 1988; Datnow, Borman, Stringfield, Overman, \& Castellano, 2003).

In addition, the study used the Pearson's chi-square test to examine whether graduates with a GPA lower than a B and those with a GPA of B or higher distributed differently across types of college admission test participation (ACT only, SAT only, and both ACT and SAT) for the Classes of 2010 and 2011.

## Results

Findings about trends in SAT and ACT participation and performance are organized by research question. School-level analyses are included in Appendix A. The numbers presented on SAT participation and performance in this report may not match the ones published recently due to changes in the business rules for reporting (Rethinam, 2011a). In the recently published SAT memorandum, the numbers were calculated by including all graduating seniors, rather than June graduates only. The table in Appendix B displays college entrance test participation and highest test scores for all graduating seniors from the MCPS Classes of 2010 and 2011 by high school.

## Findings for Question One

1. What were the trends in MCPS graduates' participation on college entrance tests for the Classes of 2007 to 2011?

The analysis examined trends of test participation of SAT, SAT only, ACT, ACT only, or both SAT and ACT for graduates from the Classes of 2007 to 2011. Test participation numbers and percentages are reported for all graduates and their subgroups defined by gender, race/ethnicity, and special services. The five-year change in the participation rate is displayed for the gender
and special service subgroups but not for the racial/ethnic groups due to the application of new race codes defined by the federal government in 2010. Correspondingly, results for racial and ethnic groups are discussed for the Classes of 2007 to 2009 and the Classes of 2010 and 2011 separately.

1a. What were the trends in SAT participation among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?

Over the past five years, SAT test takers decreased 7.7 percentage points, from $79.0 \%$ in 2007 to $71.3 \%$ in 2011, which was historically low for SAT participation in MCPS (Table 1.1). Male graduates were less likely than Female graduates to take the SAT, while Male and Female graduates experienced a comparable decrease in participation with 7.8 and 7.6 percentage points, respectively. Graduates who received special services showed a steeper decline in SAT participation, with a five-year decreases of 20.0 , 12.1 , and 10.7 percentage points for ESOL, FARMs, and special education recipients, respectively.

Among race and ethnic groups, Asian and White graduates showed consistently higher SAT participation rates than African American and Hispanic graduates for the Classes of 2007 to 2009; the participation rates for all racial and ethnic groups remained steady across the three graduating classes, with $89 \%$ for Asian, about $85 \%$ for White, slightly above $70 \%$ for African American, and 57\% for Hispanic graduates (Table 1.1). For the Classes of 2010 and 2011, Asian and White graduates also showed a higher SAT participation rate than African American and Hispanic graduates, with graduates indicating Two or More Races in the middle; the participation rates for all racial and ethnic groups were the same or similar between the two graduating classes, about $85 \%$ for Asian, $81 \%$ for White, $77 \%$ for Two or More Races, slightly above $60 \%$ for African American, and $49 \%$ for Hispanic graduates.

Table 1.1
College Entrance Examination Participation (SAT) of the MCPS Classes of 2007 to 2011 by Demographic Group

| Subgroup | All June graduates |  |  |  |  | $N$ Took SAT |  |  |  |  | \% Took SAT |  |  |  |  | Five year \% point change ${ }^{\text {a }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Special Ed. | 725 | 792 | 753 | 813 | 890 | 334 | 319 | 356 | 278 | 315 | 46.1 | 40.3 | 47.3 | 34.2 | 35.4 | -10.7 |
| ESOL | 308 | 321 | 344 | 314 | 275 | 121 | 145 | 138 | 72 | 53 | 39.3 | 45.2 | 40.1 | 22.9 | 19.3 | -20.0 |
| Asian | 1521 | 1513 | 1577 | 1621 | 1493 | 1359 | 1294 | 1406 | 1364 | 1283 | 89.3 | 85.5 | 89.2 | 84.1 | 85.9 |  |
| African Am. | 2030 | 2097 | 2106 | 2061 | 2168 | 1453 | 1433 | 1555 | 1279 | 1367 | 71.6 | 68.3 | 73.8 | 62.1 | 63.1 |  |
| Hispanic | 1468 | 1602 | 1760 | 1918 | 2001 | 837 | 867 | 1003 | 940 | 986 | 57.0 | 54.1 | 57.0 | 49.0 | 49.3 |  |
| White | 4661 | 4632 | 4359 | 4130 | 3933 | 3995 | 3656 | 3677 | 3351 | 3188 | 85.7 | 78.9 | 84.4 | 81.1 | 81.1 |  |
| Two or More Races |  |  |  | 287 | 310 |  |  |  | 221 | 239 |  |  |  | 77.0 | 77.1 |  |

Note. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were included with all students but were not reported separately due to small numbers. Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010. These results, calculated based on the total number of June graduates, might not match the already published results in the 2011 SAT memorandum which included all graduating seniors in the year (Rethinam, 2011a).
${ }^{\text {a}}$ Five year $\%$ change $=$ percentage in 2011 - percentage in 2007; changes in percentage points were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010.

The downward trend in SAT participation was more evident among graduates who took the SAT only. From the Class of 2007 to the Class of 2011, the SAT participation rate decreased from 62.5 to 48.4, a total of 14.1 percentage points, for all graduates (Table 1.2). This decrease in SAT participation doubled the one for all SAT testers including those taking both the SAT and ACT. Among graduates taking the SAT only, Male and Female graduates showed similar participation rates across the five years and the Male participation rate decreased slightly more than the Female rate ( 14.8 versus 13.4 percentage points). Special service groups showed a sharper decrease in SAT only participation, with 23.4, 20.1, and 13.9 percentage point decreasess for ESOL, FARMs, and special education recipients, respectively.

Among graduates who took the SAT only, a higher participation rate was observed for Asian graduates than for White, African American, and Hispanic graduates in the Classes of 2007 to 2009. Across the three years, Asian graduates showed a greater decrease ( 8.2 percentage points from $78.0 \%$ to $69.8 \%$ ) in the participation rates than White ( 6.7 percentage points from $62.8 \%$ to $56.1 \%$ ), African American ( 6.3 percentage points from $58.7 \%$ to $52.4 \%$ ), and Hispanic ( 5.2 percentage points from $50.5 \%$ to $45.5 \%$ ) graduates (Table 1.2). For the Classes of 2010 and 2011, about two thirds of Asian graduates, about one half White and Two or More Races graduates, more than $40 \%$ of African American, and more than one third of Hispanic graduates took the SAT only; there was a small increase in the participation rate across all racial and ethnic groups.

Note. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were included with all students but were not reported separately due to small numbers. Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010.
${ }^{\text {a }}$ Five year $\%$ change = percentage in 2011 - percentage in 2007; changes in percentage points were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010.

1b. What were the trends in ACT participation among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?

In contrast to the downward trend of SAT participation, ACT participation showed an upward trend across the Classes of 2007 to 2011. Graduates taking the ACT (including those taking the SAT as well) increased nearly 12 percentage points, from $17.9 \%$ in 2007 to $29.8 \%$ in 2011 (Table 1.3). As with the SAT, Male graduates were less likely than Female graduates to take the ACT; across the five years, however, Male graduates nearly doubled their participation rate by 12.4 percentage points, while the participation rate for Female graduates increased about $50 \%$ by 11.3 percentage points. Special services groups also showed compatible increases in ACT participation. From the Classes of 2007 to 2011, the ACT participation rate increased by 15.4 percentage points ( 1.66 times) for the FARMS group, by 10.9 percentage points ( 0.74 times) for the special education group, and by 11.1 percentage points ( 6.94 times) for the ESOL group.

White graduates were more likely to take the ACT than African American, Asian, and Hispanic graduates for the Classes of 2007 to 2009. Over the three years, African American and Asian graduates increased their ACT participation by 9.8 ( $15.1 \%$ to $24.9 \%$ ) and 9.0 ( $11.8 \%$ to $20.8 \%$ ) percentage points, respectively, compared to $7.6(24.6 \%$ to $32.2 \%)$ for White and $7.5(7.1 \%$ to $14.6 \%$ ) percentage points for Hispanic graduates (Table 1.3). For the Classes of 2010 and 2011, White graduates (about 38\%) still led other racial and ethnic groups such as Two or More Races (about one third), African American (nearly 30\%), and Asian and Hispanic (about one fifth) graduates, in ACT participation; the participation rate was comparable between the two years for all the racial and ethnic groups.

| Two or More Races |  |  |  | 287 | 310 |  |  |  | 96 | 97 |  |  |  | 33.4 | 31.3 |  |

Note. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were included with all students but were not reported separately due to small numbers. Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010.
${ }^{\text {a }}$ Five year $\%$ change $=$ percentage in 2011 - percentage in 2007; changes in percentage points were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010.

The upward trend also was found for ACT-only participation. Across the five graduating classes, the ACT-only participation rate for all graduates increased 5.4 percentage points from $1.4 \%$ in 2007 to $6.8 \%$ in 2011 (Table 1.4). Male and Female graduates taking the ACT only increased 4.08 times by 5.3 percentage points and 3.44 times by 5.5 percentage points in the participation rate, respectively. Among special services recipients, the ACT-only participation rate rose nearly 4 times by 7.5 percentage points for the FARMS group, 1.75 times by 7.7 percentage points for the special education group, and 6 times by 7.8 percentage points for the ESOL group.

Among graduates taking the ACT only, participation rates for White and African American graduates were relatively higher than their Hispanic and Asian peers for the Classes of 2007 to 2009. The three-year percentage increase was higher for Hispanic ( 2.6 points from $0.5 \%$ to $3.1 \%$ ) and White ( 2.3 points from $1.7 \%$ to $4.0 \%$ ) graduates than for their African American ( 1.3 points from $2.2 \%$ to $3.5 \%$ ) and Asian (1.1 points from $0.4 \%$ to 1.5 ) peers (Table 1.4). For the Classes of 2010 and 2011, African American and Two or More Races graduates showed the highest, and Asian graduates showed the lowest ACT-only participation rate. The two-year rate change was mixed for the racial and ethnic groups, having a relatively high increase for African American (1.6 points from $7.9 \%$ to $9.5 \%$ ) and White ( 1.2 points from $5.8 \%$ to $7.0 \%$ ) graduates, remaining at $8 \%$ for Two or More Races graduates, and having a slight increase for Hispanic graduates ( 0.4 points from $6.3 \%$ to $6.7 \%$ ), but a slight decrease for Asian graduates ( 0.3 points from $2.8 \%$ to $2.5 \%$ ).

Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010.
${ }^{\text {a }}$ Five year $\%$ change = percentage in 2011 - percentage in 2007; changes in percentage points were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010.

1c. What were the trends in participation of both the ACT and SAT among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?

There was an upward trend for participation of both the ACT and SAT in MCPS. From the Class of 2007 to the Class of 2011, the percentage of graduates taking both tests increased 6.4 points from $16.5 \%$ to $22.9 \%$ (Table 1.5). Although Male graduates were less likely than Female graduates to take both the ACT and SAT in all the years, the five-year increase in the participation rate was higher for Male ( 7.0 percentage points from $13.4 \%$ to $20.4 \%$ ) than for Female ( 5.8 percentage points from $19.6 \%$ to $25.4 \%$ ) graduates. FARMS recipients doubled their participation rate with a 7.9 percentage-point increase, and ESOL recipients increased the rate 11 times with a 3.3 percentage-point increase over the five years. There was a 3.3 percentagepoint increase for special education recipients (from $10.3 \%$ to $13.6 \%$ ).

White graduates were more likely to take both the ACT and SAT than African American, Asian, and Hispanic graduates for the Classes of 2007 to 2009. Over the three years, African American and Asian graduates increased their ACT participation by 8.6 ( $12.9 \%$ to $21.5 \%$ ) and 7.9 (11.4\% to $19.3 \%$ ) percentage points, respectively, compared to $5.3(22.9 \%$ to $28.2 \%)$ for White and $5.0(6.5 \%$ to $11.5 \%)$ percentage points for Hispanic graduates (Table 1.5). For the Classes of 2010 and 2011, White graduates (more than $30 \%$ ) still led other racial and ethnic groups such as Two or More Races (about one fourth), African American and Asian (about one fifth), and Hispanic (less than $15 \%$ ) graduates, in ACT and SAT participation; the participation rate was comparable between the two years for all the racial and ethnic groups.

Note. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were included with all students but were not reported separately due to small numbers. Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010.
${ }^{\text {a Five year }} \%$ change $=$ percentage in 2011 - percentage in 2007; changes in percentage points were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010.

## Findings for Question Two

2. What were the trends in MCPS graduates' performance on college entrance tests for the Classes of 2007 to 2011?

The analysis also examined trends in performance of graduates from the Classes of 2007 to 2011 who took SAT, SAT only, ACT, ACT only, or both the SAT and ACT. Average composite test scores are reported for all graduates and their subgroups defined by gender, race/ethnicity, and special services. The average SAT composite score in the Class of 2010 was the highest of any class in MCPS history including classes that took the previous version of the SAT. However, this study performed the significance test for the five-year change (2007 to 2011) with t-test analysis. The significance test was not performed for the racial/ethnic groups due to the application of new race codes defined by the federal government in 2010. Results for racial and ethnic groups are discussed for the Classes of 2007 to 2009 and the Classes of 2010 and 2011 separately.

2a. What were the trends in SAT performance among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?

The Classes of 2010 and 2011 earned a higher average composite score than the Classes of 2007 to 2009 for all SAT test takers and their subgroups by gender and special service (Table 2.1). The five-year increase in the mean score was 16 points for all SAT testers which was statistically significant. The mean composite score also significantly increased across the five years for Male (18 points) and Female (16 points) graduates, as well as for FARMS (57 points) and ESOL (94 points) recipients.

The five-year increase in the SAT composite score was greater among graduates taking the SAT only, with 26 points for all graduates, 21 points for Male, 32 points for Female, 62 points for FARMS, and 115 points for ESOL graduates (Table 2.1).

For the racial and ethnic groups of all SAT testers, the mean composite scores from the Classes of 2007 to 2009 increased for Asian graduates, remained similar for African American and White graduates, and decreased for Hispanic graduates (Table 2.1). The average composite scores for all the racial and ethnic groups were comparable between the Classes of 2010 and 2011, although the scores in 2011 were lower than the scores in 2010, with the exception of Hispanic graduates. For graduates who took the SAT only, a similar pattern of mean composite score changes from the Classes 2007 to 2009 was observed. The mean composite scores of SAT-only testers for the Classes of 2010 and 2011 also were comparable except for a 21-point increase for the Two or More Races group.

Table 2.1
College Entrance Examination (SAT) Performance of the MCPS Classes of 2007 to 2011 by Demographic Group

| SAT testers | Mean composite score for all SAT testers ${ }^{\text {b }}$ |  |  |  |  | 5-year SAT mean score change ${ }^{a}$ | Mean composite score for SAT-only testers |  |  |  |  | 5-year SAT only mean score change ${ }^{\text {a }}$ |

| Special Ed. | 1353 | 1309 | 1354 | 1374 | 1356 | +3 | 1361 | 1300 | 1343 | 1381 | 1360 | -1 |
| ESOL | 1127 | 1085 | 1156 | 1259 | 1221 | +94* | 1128 | 1087 | 1147 | 1261 | 1243 | +115* |
| Asian | 1706 | 1720 | 1748 | 1769 | 1763 |  | 1702 | 1704 | 1734 | 1759 | 1757 |  |
| African Am. | 1357 | 1336 | 1356 | 1397 | 1385 |  | 1353 | 1328 | 1355 | 1401 | 1397 |  |
| Hispanic | 1418 | 1401 | 1398 | 1474 | 1479 |  | 1402 | 1375 | 1385 | 1465 | 1465 |  |
| White | 1736 | 1740 | 1733 | 1751 | 1747 |  | 1741 | 1738 | 1739 | 1754 | 1760 |  |
| Two or More Races |  |  |  | 1688 | 1687 |  |  |  |  | 1676 | 1697 |  |

Note. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were included with all students but were not reported separately due to small numbers. Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010. Mean SAT composite scores are rounded to nearest integers.
${ }^{\text {a }}$ Five year mean change $=$ mean in $2011-$ mean in 2007; mean changes were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010. Five-year changes are shown in integers due to rounding of composite scores. Significance test: ${ }^{* * *} p<.001 ; * * p<.005 ; * p<.05$.
${ }^{\mathrm{b}}$ The results, calculated based on the total number of June graduates, might not match the already published results in the 2011 SAT memorandum which included all graduating seniors in the year (Rethinam, 2011a).

For the Class of 2010, the average SAT composite score met the 1650 benchmark-a score identified as Key 7 among MCPS' Seven Keys to College and Career Readiness-for all SAT testers and SAT-only testers. For the Class of 2011, the average SAT composite score for all SAT testers and SAT-only testers was slightly lower than the MCPS benchmark but still far beyond the 1550 identified as the college readiness indictor by the College Board.

For the Classes of 2010 and 2011, Male graduates were near or exceeded the MCPS benchmark for college and career readiness on the SAT composite score. Although Female graduates did not meet the MCPS benchmark, they were far above the College Board's benchmark. For the Classes of 2010 and 2011, White, and Two or More Races graduates scored above the MCPS' SAT benchmark while African American and Hispanic graduates did not meet the College Board's benchmark. The mean SAT composite scores for special service recipients across the years were below the College Board's benchmark.

2b. What were the trends in ACT performance among MCPS graduates by gender; race/ethnicity; and participation in FARMS, special education, and ESOL services?

Among all ACT testers and those taking the ACT only, changes of mean ACT composite scores across the Classes of 2007 to 2011 were not as obvious as the changes of mean SAT composite scores due to the small range of the ACT score. However, there was a one-point decease from 2007 to 2011 for all ACT testers (Table 2.2). This decrease was statistically significant and led the mean score below the MCPS benchmark of 24 for college and career readiness in 2011. For all ACT testers, Asian, White, and Two or More Races graduates attained the MCPS benchmark across the five years, whereas only White graduates for the Classes of 2008 to 2011 did so among ACT-only testers.

Across the five years, the mean ACT composite score was higher for all ACT testers than for ACT-only testers among all the testers and most of their subgroups.

Table 2.2
College Entrance Examination (ACT) Performance of the MCPS Classes of 2007 to 2011 by Demographic Group

| ACT testers | Mean composite score for all ACT testers |  |  |  |  | 5-year ACT mean score change ${ }^{\text {a }}$ | Mean composite score for ACT-only testers |  |  |  |  | 5-year ACT only mean score change ${ }^{\text {a }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2007 | 2008 | 2009 | 2010 | 2011 |  | 2007 | 2008 | 2009 | 2010 | 2011 |  |
| All | 24 | 24 | 23 | 23 | 23 | -1* | 20 | 21 | 21 | 20 | 20 | 0 |
| Male | 24 | 24 | 23 | 23 | 24 | 0 | 20 | 21 | 21 | 20 | 20 | 0 |

| FARMS | 18 | 18 | 18 | 18 | 18 | 0 | 16 | 16 | 15 | 17 | 16 | 0 |
| Special Ed. | 19 | 19 | 19 | 19 | 19 | 0 | 18 | 19 | 18 | 18 | 19 | +1 |
| ESOL | 15 | 16 | 16 | 16 | 16 | $+1^{\text {b }}$ | 16 | 22 | 14 | 15 | 17 | $+1^{\text {b }}$ |
| Asian | 26 | 26 | 26 | 26 | 26 |  | 20 | 23 | 22 | 21 | 20 |  |
| African Am. | 18 | 18 | 18 | 18 | 18 |  | 16 | 16 | 16 | 16 | 17 |  |
| Hispanic | 21 | 21 | 19 | 20 | 20 |  | 18 | 17 | 17 | 18 | 17 |  |
| White | 25 | 25 | 25 | 25 | 25 |  | 22 | 24 | 25 | 24 | 25 |  |
| Two or More Races |  |  |  |  | 24 |  |  |  |  | 19 | 20 |  |

Note. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were included with all students but were not reported separately due to small numbers. Comparison of 2010 and 2011 with other school years' racial/ethnic groups should be made with caution due to changes in federal government definitions of race/ethnicity in 2010.
${ }^{\text {a }}$ Five year mean change $=$ mean in $2011-$ mean in 2007 ; mean changes were not computed for racial/ethnic groups due to changes in federal government definitions of race/ethnicity in 2010. Five-year changes are shown in integers due to rounding of composite scores, therefore, a value of zero could mean a change smaller than one point. Significance test: ${ }^{* * *} p<.001 ;{ }^{* *} p<.005 ;{ }^{*} p<.05$.
${ }^{\mathrm{b}}$ Significance was not tested due to the small sample size (only four ESOL students took the SAT only in 2007).

## Findings for Question Three

3. How was MCPS graduates' performance on college entrance tests associated with their test participation for the Classes of 2010 and 2011?

Tables 3.1 and 3.2 present findings from the ANCOVA procedure which compared the adjusted group mean differences in the college admission test scores between graduates who took both SAT and ACT and those who took the SAT or ACT only in the Classes of 2010 and 2011.

3a. Was there a difference in mean SAT scores between graduates who took both the ACT and SAT and those who took the SAT only, after controlling for graduates' demographic and service variables?

The highest possible composite score for the SAT is 2400 . Results showed that the adjusted group mean differences in the SAT composite scores between SAT and ACT takers and SATonly takers were not significant for both the Classes of 2010 and 2011 (Table 3.1). This indicated that the two groups of graduates were comparable in terms of SAT performance.

Table 3.1
Comparison of SAT Scores Between Graduates Taking SAT only and Graduates Taking Both the SAT and ACT in 2010 and 2011

| Class of June graduates | Adjusted Means |  |  |  | Group mean difference | $p$ | ES |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | SAT and ACT |  | SAT only |  |  |  |  |
|  | Mean | $N$ | Mean | $N$ |  |  |  |
| Class of 2010 | 1113.75 | 2429 | 1111.87 | 4726 | 1.88 | . 789 | 0.01 |
| Class of 2011 | 1113.58 | 2269 | 1125.06 | 4794 | -11.48 | . 116 | 0.04 |

Note. Class of 2010: $t=.27$ and $S E=7.04$; Class of 2011: $t=-1.57$ and $S E=7.31$. FARMS, ESOL, race/ethnicity, special education, and gender were controlled for. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were not included in the analytical model due to small numbers.

3b. Was there a difference in mean ACT scores between graduates who took both the ACT and SAT and those who took the ACT only, after controlling for graduates' demographic and service variables?

Results revealed that the adjusted mean ACT scores of graduates who took both the SAT and ACT were statistically different from the scores of those who took the ACT only in both the Classes of 2010 and 2011 (Table 3.2). The highest possible composite score for the ACT is 36. After controlling for race/ethnicity; receipt of FARMS, ESOL, or special education services; and gender, the SAT and ACT takers scored significantly higher than the ACT-only takers on the ACT, with 2.07 and 1.90 for the Classes of 2010 and 2011, respectively. The effect size measures showed that the observed differences in the adjusted mean differences were considered significant in the educational setting, with a small effect size of 0.35 for the Class of 2010 and 0.32 for the Class of 2011.

Table 3.2
Comparison of ACT Scores Between Graduates Taking ACT only and Graduates Taking Both the ACT and SAT in 2010 and 2011

| Class of June graduates | Adjusted Means |  |  |  | Group mean difference | $P$ | ES |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | ACT and SAT |  | ACT only |  |  |  |  |
|  | Mean | $N$ | Mean | $N$ |  |  |  |
| Class of 2010 | 15.88 | 2429 | 13.81 | 592 | 2.07 | . 000 | 0.35 |
| Class of 2011 | 16.96 | 2269 | 15.07 | 679 | 1.90 | . 000 | 0.32 |

Note. Class of 2010: $t=9.27$ and $S E=0.22$; Class of 2011: $t=8.80$ and $S E=0.22$. FARMS, ESOL, race/ethnicity, special education, and gender were controlled for. American Indian or Alaskan Native and Native Hawaiian or Other Pacific Islander students were not included in the analytical model due to small numbers.

## Findings for Question Four

4. What was the association of college entrance test participation with graduates' overall high school GPA for the MCPS Classes of 2010 and 2011?

Types of college entrance test participation were cross tabulated by the levels of unweighted GPAs for graduates from the Classes of 2010 and 2011. The Pearson Chi-square statistic was performed to determine whether graduates who took the ACT only, SAT only, or both tests differed between their GPA levels (a GPA of B or higher versus a GPA lower than a B). The results showed significant differences in the frequency distribution between the higher and lower GPA levels across test participation types; the two graduating classes shared a similar
distribution pattern (Table 4.1). For the Classes of 2010 and 2011, the ACT-only testers were more likely to fall in the lower level (more than 60\%) than in the higher level (less than $40 \%$ ) of GPA. The SAT-only testers, on the other hand, were more likely to fall in the higher level (more than $55 \%$ ) than in the lower level (less than $45 \%$ ) of GPA. Among graduates taking both the ACT and SAT, more than two thirds of them had a GPA of B or higher, while less than one third had a GPA lower than a B for both graduating classes.

Table 4.1
College Entrance Test Participation and Unweighted GPA
Cross Tabulation for the Classes of 2010 and 2011

| Participation of College Entrance Tests |  | Unweighted GPA |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Class of 2010 ${ }^{\text {a }}$ |  | Class of 2011 ${ }^{\text {b }}$ |  |
|  |  | Lower than B | B or higher | Lower than B | $B$ or higher |
| ACT only | Count | 366 | 227 | 416 | 264 |
|  | \% within GPA | 61.7\% | 38.3\% | 61.2\% | 38.8\% |
| SAT only | Count | 1998 | 2748 | 2148 | 2656 |
|  | \% within GPA | 42.1\% | 57.9\% | 44.7\% | 55.3\% |
| ACT \& SAT | Count | 756 | 1677 | 746 | 1531 |
|  | \% within GPA | 31.1\% | 68.9\% | 32.8\% | 67.2\% |
| Total | Count | 3120 | 4652 | 3310 | 4451 |
|  | \% within GPA | 40.1\% | 59.9\% | 42.6\% | 57.4\% |

${ }^{a}$ Pearson Chi-Square $=205.753, d f=2, p<.001 ;{ }^{6}$ Pearson Chi-square $=194.789, d f=2, p<.001$.

## Conclusions

## Trends of College Entrance Test Participation

SAT. The overall SAT participation rate decreased from the Class of 2007 to the Class of 2011 by 7.7 percentage points. Similar decreases in SAT participation rates were found for Male and Female graduates, while greater decreases were found for special services subgroups. Among racial/ethnic groups, Asian and White graduates showed consistently higher SAT participation rates than African American and Hispanic graduates for the Classes of 2007 to 2009; the participation rates for all racial/ethnic groups remained steady across the three years. For the Classes of 2010 and 2011, Asian, White, and Two or More Races graduates also showed higher SAT participation rates than African American and Hispanic graduates; the participation rates for all racial/ethnic groups were the same or similar between the two years.

Examining the SAT-only group, a steeper downward trend in SAT participation was observed; the rate dropped by 14.1 percentage points from the Class of 2007 to the Class of 2011. Similar decreases in SAT participation rates also were found for Male, Female, and special education graduates while greater decreases were found for FARMS and ESOL groups. A decrease in SAT participation for SAT-only takers also was found across racial/ethnic groups from 2007 to 2009, whereas there was a slight increase in SAT participation for SAT-only takers between the Classes of 2010 and 2011.

ACT. In contrast to the downward trend for SAT participation, the overall ACT participation rate increased from the Class of 2007 to the Class of 2011 by 11.9 percentage points for all ACT takers and by 5.4 percentage points for ACT-only takers. Similar increases in ACT participation rates also were found for gender and special services subgroups for all ACT takers and ACT-only takers. Although the increase in participation was larger for all ACT takers than for ACT-only takers, the participation rate for ACT-only takers increased multiple times from the Classes of 2007 to 2011 for all graduates and gender and special services groups.

An increase from the Classes of 2007 to 2009 in ACT participation also was found across racial/ethnic groups for all ACT takers and ACT-only takers, whereas the participation rate remained relatively steady between the Classes of 2010 and 2011 across racial/ethnic groups.

ACT and SAT. A relatively moderate increase in the participation rate of both the ACT and SAT was observed ( 6.4 percentage points). Male graduates were less likely than Female graduates to take both tests, but the participation rate of Male graduates increased more than Female graduates over the years. The percentage of graduates taking both the ACT and SAT doubled for the FARMS group and increased more than 10 times for the ESOL group across the years; there also was a small increase for the special education group in the participation of both tests.

Increases in graduates taking both the SAT and ACT also was found across racial/ethnic groups from 2007 to 2009. For the Classes of 2010 and 2011, the percentage of graduates taking both examinations decreased for all racial/ethnic groups except Asian test takers.

## Trends of College Entrance Test Performance

SAT. The average SAT composite score significantly increased from 2007 to 2011 for all graduates ( 16 points), Male (18 points) and Female (16 points) graduates, and the FARMS (57 points) and ESOL (94 points) groups for all SAT takers. Among SAT-only takers, there was a larger and significant five-year increase for all graduates ( 26 points), Male ( 21 points) and Female ( 32 points) graduates, and the FARMS ( 62 points) and ESOL ( 115 points) groups. However, the five-year mean score change for all SAT takers and SAT-only takers was not significant among graduates receiving special education services.

Results in average SAT mean composite score changes were mixed for racial/ethnic groups. For all SAT takers and SAT-only takers, the mean composite scores from the Classes of 2007 to 2009 increased for Asian graduates, remained similar for African American and White graduates, and decreased for Hispanic graduates. The average composite SAT scores for all racial and ethnic groups were comparable between the Classes of 2010 and 2011, with the exception of a 21-point increase for the Two or More Races group who took the SAT only.

ACT. The five-year change in average ACT composite scores was not noticeable due to lack of variation and smaller range in the ACT composite score ( 36 the highest possible score). However, the one-point or less decrease over the years in the average ACT composite scores was significant for all ACT takers and all Female ACT takers. For ACT-only takers, there was a significant one-point increase for Female graduates.

## Associations of Performance with Participation on College Entrance Tests

Graduates who took both the ACT and SAT significantly outperformed those who took the ACT only by about two points on the ACT composite score for the Classes of 2010 and 2011, after controlling for student demographic and special services variables. The adjusted mean difference in the ACT between the two groups of students had a small effect size for both graduating classes.

Graduates who took both ACT and SAT and those who took the SAT only showed comparable performances on the SAT, after controlling for student demographic and special service variables. The adjusted mean difference in SAT composite scores between the two groups of students was not significant for both Classes of 2010 and 2011.

## Associations of College Entrance Test Participation with GPA

For the Classes of 2010 and 2011, graduates who took the ACT only tended to have a lower GPA than those who took the SAT only or both tests. Specifically, less than $40 \%$ of ACT-only takers had a GPA of B or higher, whereas more than one half of SAT-only testers and more than two thirds of graduates taking both tests had a GPA of B or higher in both graduating classes.

## Recommendations

- Schools should use the college readiness monitoring tool to monitor and prepare students for both the ACT and SAT.
- The school district should consider providing emphasis on ACT performance similar to the SAT.
- As a follow-up study to this research, the college readiness M-STAT team should examine why there was a substantial increase in ACT-only participation in certain high schools.

Note. Results are not reported (---) for the years in which schools did not have graduating classes. To comply with federal requirements, any percentage rates greater than or equal to $95.0 \%$ or
less than or equal to $5.0 \%$ is noted as $\geq 95.0$ or $\leq 5.0$, respectively, and the number of students meeting or exceeding the benchmark is not reported (--). Additionally, results are not reported (--) for groups with fewer than 10 test takers. For groups of between 10 and 20 test takers, only the percentage rate is reported.
${ }^{\text {a }}$ Graduates enrolled in an MCPS high school in June of their graduation year, including graduates enrolled in special schools during Grade 12.
