

Office of the Superintendent of Schools
MONTGOMERY COUNTY PUBLIC SCHOOLS
Rockville, Maryland

May 6, 2002

MEMORANDUM

To: Members of the Board of Education

From: Jerry D. Weast, Superintendent of Schools

Subject: Progress in Grades 2, 4 and 6 on the 2002 Comprehensive Tests of Basic Skills (CTBS) and California Achievement Tests (CAT)

Students in Grades 2, 4, and 6 performed at or above last year's results on nationally normed tests in reading, mathematics, and language, with all subject areas at or exceeding the 64th percentile nationally for the first time and more than half of all categories surpassing the 70th percentile. At the same time, impressive gains were made by all racial and ethnic groups of students, particularly African American and Hispanic students. Only African American students were at or above all of the results for last year at all three grade levels. In fact, gains by African American students in Grade 6 in some subject areas were twice or more as large as the countywide increases. While there remains a significant difference in overall student performance by race and ethnicity, the new data underscore the continuing progress made in raising the bar for overall student achievement and closing the gap in targeted areas. The gains by sixth grade students systemwide, especially the 10-point increase in mathematics computation, also demonstrates the success of schools in preparing students for the increased rigor expected in high school.

Table 1
2001 and 2002 Median National Percentile Ranks
for the Nation and MCPS, Grades 2, 4, and 6¹

Subtest	Nation	Grade 2		Grade 4		Grade 6	
		2001	2002	2001	2002	2001	2002
Reading	50	64	64	67	67	64	66
Language	50	55	68	74	74	63	66
Mathematics	50	70	70	71	71	72	72
Language Mechanics	50	77	77	68	75	60	65
Math Computation	50	68	76	71	71	60	70

¹ The median is the middle score of a group. That is, half of the scores are above it and half are below. Thus, if the median national percentile rank for a group of local students is 78, one can then say that half of the students in the local group outperformed 78 percent of students in the national reference group. Using the median national percentile rank calls for extreme caution when interpreting differences in scores. An apparent large difference in percentile ranks can be the result of only one additional correct answer. One of the most extreme examples of this is on the Grade 2 Language subtest, where one more correct answer can increase the percentile rank from 55 to 68.

The new test results are from the spring 2002 administration of the nationally normed *Terranova* Comprehensive Tests of Basic Skills (CTBS) and the *Terranova* California Achievement Tests². (In the spring of 2002, MSDE replaced the CTBS in Grade 6 with the CAT.) These tests are used by the Maryland State Department of Education (MSDE) to evaluate student performance in reading, language, language mechanics, mathematics, and mathematics computation. MSDE includes CTBS/CAT results for schools and school districts as median national percentile ranks² in its annual Maryland School Performance Program report card. (See Attachment E for an explanation of norm-referenced testing.) Test results for years prior to 2001 were computed differently by MSDE, rendering the 2001 results as the new baseline³ administration for current and future comparisons.

The improved results this year occurred with an enrollment growth of more than 2,700 students, including more children affected by poverty and learning English as a second language. In fact, while the total enrollment grew by 2 percent this year, there was a 4.7-percent increase in the percentage of students qualifying for the free breakfast and lunch program, which is a measure of the greatest level of poverty among students participating in the Free and Reduced-Priced Meal Services (FARMS).

The improvement in mathematics at each grade level is particularly noteworthy. For example, the 10-point improvement in math computation in Grade 6 now places student performance above the 70th percentile in this subject area at each grade level for the first time. This improvement reflects well on a mathematics program systemwide that has been undergoing a significant overhaul following the audit of the mathematics programs last year.

Overall, the results continue to be well above the national average in each grade level.

Grade 2 had the largest systemwide improvement in single subject area, a 13-point increase in language along with an eight-point increase in mathematics computation. In the other subject areas, students in Grade 2 maintained the previous year's results. More analysis of the data, especially among individual schools, will be necessary to understand the results more clearly in relation to the early childhood initiatives. But, certainly, the gains reflect progress at a time when the Board of Education is continuing to strengthen expand full-day kindergarten, reduce class sizes in Grades 1 and 2, implement a more rigorous curriculum and instructional program, and strengthen professional staff development.

Grade 4 increased by seven points overall in language mechanics. All other subject areas systemwide maintained the previous year's results, which includes the overall achievement of four of the five subject areas scoring above the 70th percentile.

² The Comprehensive Tests of Basic Skills (CTBS) and the California Achievement Tests (CAT) are components of the Terranova series of assessments published by CTB/McGraw-Hill. The CTBS and the CAT were normed nationally in 1996 and 2000, respectively.

³ Calculation of the 2001 and 2002 median national percentile ranks reflects the inclusion requirements set by MSDE in spring 2001. According to these requirements, all students who participated in testing are to be included in the calculation of the median national percentile rank for all subtests, with one exception. Students who used a calculator for the Mathematics Computation subtest as mandated by an Individualized Educational Program or Section 504 Plan are not included in the calculation of the median national percentile rank for this subtest only. Therefore, comparisons of CTBS scores prior to 2001 are not valid.

Grade 6 had the most gains systemwide. Five of the six subject areas increased, with math computations increasing by 10 points to the 70th percentile. All of the subject areas were at or above the 66th percentile.

Results by Racial/Ethnic Groups

More analysis will be necessary on the improvement among African American and Hispanic students (see Attachment A), but the preliminary review demonstrates that the performance of African American and Hispanic students in Montgomery County is consistent with the performance of all students nationally. Table 2 below shows an example of these performance patterns as related to one content area, Grade 4 mathematics. The percentile ranks for African American and Hispanic students are almost equally divided across the four quarters of the national distribution, consistent with national norms.

Table 2
Differences in the Distribution of Percentages of Racial/Ethnic Groups
Within CTBS National Percentile Ranks
Grade 4 Mathematics

Percentage of Racial/Ethnic Group at Percentile Ranks 1-25, 26-50, 51-75, and 76-99

Percentile Rank	Nation	Montgomery County Public Schools			
		African American	Asian American	Hispanic	White
76-99	25	21	64	25	66
51-75	25	23	18	23	19
26-50	25	29	12	27	10
1-25	25	27	6	25	5

Results of Non-Standard Administrations

The national normative data are based on the performance of students who took the CTBS/CAT under standardized conditions. MSDE permitted students to take the Mathematics Computation subtest with a calculator if that accommodation was specified in their Individualized Education Program or 504 Plan. A total of 1,532 students (5% of the students in Grades 2, 4, and 6 who took the Mathematics Computation subtest) used this accommodation. Their median percentile ranks were 68 in Grade 2, 62 in Grade 4, and 46 in Grade 6.

Results by Gender

Results for male and female students were slightly different. The range of median national percentile ranks for female students was 66 to 87 across the grades and content areas. The range for male students was 55 to 78 (Attachment B).

Results by Support Services, including Special Education

Students receiving support services—English for Speakers of Other Languages (ESOL), Free and Reduced-Price Meals (FARMS), and Special Education—scored substantially lower than students not receiving those services (Attachments C and D). The highest median national percentile ranks for these students across grades and content areas were below the lowest median national percentile rank for students not receiving these services.

The highest median national percentile rank for ESOL students was 53 while the lowest for non-ESOL students was 65. The difference was similar for FARMS, with the highest median national percentile rank for students receiving this service being 55 and the lowest for non-FARMS students being 68. For special education services the data are divided according to the number of hours of service each week. The lowest median national percentile rank for students not receiving special education services was 64. The highest median national percentile rank for the group with less intensive services (1 to 15 hours) was 62, while the highest median national percentile rank for the group with most intensive services (more than 15 hours) was 39.

Results by School

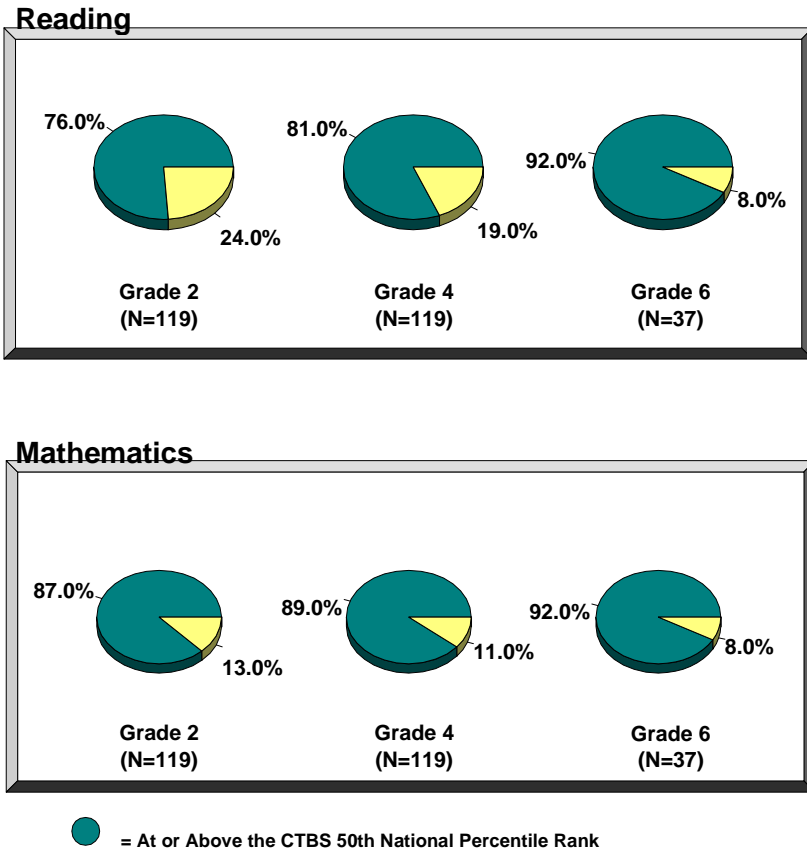

A total of 119 elementary schools participated in the Grade 2 and Grade 4 CTBS testing. A total of 37 middle schools and 2 elementary schools participated in the Grade 6 CAT testing. The vast majority of these schools received a median national percentile rank at or above the national average, or 50th percentile (Table 3, below). This is particularly true of middle schools; over ninety percent of these schools reached this level of performance in all areas, except in Language Mechanics. Table 3 summarizes these results. (Individual school results are in Attachment F.)

Table 3
Number (N) and Percentage (%) of MCPS Schools Scoring at the
50th Median National Percentile Rank and Above

Subtest	Grade 2 (119 schools)		Grade 4 (119 schools)		Grade 6 (37 schools)	
	N	%	N	%	N	%
Reading	90	76	96	81	34	92
Language	92	77	102	86	35	95
Mathematics	104	87	106	89	34	92
Language Mechanics	115	97	111	93	32	86
Mathematics Computation	105	88	111	93	36	97

The percentage of schools that received a median national percentile rank at or above the 50th national percentile in reading and mathematics increased from the elementary to the middle school level. In reading, the percentage of such schools increases from 76 to 92 percent, while in mathematics the percentage of these schools grew from 87 to 92 percent. Chart 1 below shows this improvement in performance.

Chart 1
Increase in the Percentage of Schools Scoring at the 50th Percentile and Above on the Reading and Mathematics Subtests

A substantial number of schools received a median national percentile rank of 75 and above, particularly at the elementary school level. Such a performance placed the average students in these schools at the top 25 percent in the nation. As can be seen in Table 4 (on the next page), two-thirds of schools reached this level of performance in language mechanics in Grade 2, while about half of the schools also scored at this level in language mechanics in Grade 2 and in language mechanics, mathematics computation, and reading in Grade 4.

Table 4
Number (N) and Percentage (%) of MCPS Schools Scoring at the
75th Median National Percentile Rank and Above

Subtest	Grade 2 (119 schools)		Grade 4 (119 schools)		Grade 6 (37 schools)	
	N	%	N	%	N	%
Reading	31	26	57	48	9	24
Language	30	25	40	34	12	32
Mathematics	46	39	56	47	15	41
Language Mechanics	78	66	60	50	8	22
Mathematics Computation	66	55	60	50	12	32

The goal of reaching the 75th percentile for all of our schools, as indicated in the chart above, is an important reflection on the remarkable continuation of a highly rigorous set of expectations in our school district. Over the next year, as the Maryland State Board of Education and MSDE determines what kind of assessment will replace the Maryland School Performance Assessment Program (MSPAP), it is important to note that progress on this most recent set of tests reflects the work of individual students. Principals, teachers, and parents will be able to use this summative data – much as they do with the formative assessment data in kindergarten – to help improve individual student performance and enhance the learning environment for each of our students, as we compare their performance with that of others across the United States.

I will continue to keep you informed.

- a. The median is the middle score of a group. That is, 50 percent of the scores are above it and 50 percent are below it. Thus, if the median national percentile rank for a group of local students is 78, one can then say that half of the students in the local group outperformed 78 percent of students in the national reference group. The median national percentile for the national reference group is 50.

NORM-REFERENCED TESTING IN A NUTSHELL**Norm-Referenced Testing (NRT)**

Norm-referenced tests are used to estimate how well local students performed on these tests in comparison to a larger group of students who have already taken these same tests. The comparison group, usually a nationwide sample of students of the same age and grade, is called the *norm group*. Their scores on the test, or *norms*, are the yardsticks against which district and individual scores are referenced. The most common NRT score is percentiles. Thus, a student who scores at the 92nd percentile indicates that his/her performance equaled or exceeded the performances of 92 percent of the students in the norm group. The Terranova Comprehensive Tests of Basic Skills (CTBS), the Terranova California Achievement Tests (CAT), the Iowa Tests of Basic Skills (ITBS), and the Metropolitan Achievement Test (MAT) are examples of national norm-referenced tests.

The following should be considered in interpreting norm-referenced results:

- Percentiles should not be confused with percentage of correct responses on a test.
- Percentiles cannot be averaged across subject areas.
- Each norm-referenced test is developed independently and uses its own norming group. This means that percentiles from two different tests cannot be compared directly.
- Norm-referenced tests are not designed to measure how well students are learning a school system's specific programs in reading, mathematics, and other skills. Rather, they are designed to measure basic skills that are deemed generally taught at specific grade levels nationwide.
