Mad Minute Multiplication Facts Fluency Progress Chart

Directions: Speed and accuracy are both important when it comes to multiplication facts. Mad Minutes are math practice sheets that are meant to be completed in sixty seconds. This packet contains several fifty and sixty fact Mad Minute sheets. The expectations for their use are the third activity described in the yellow “Rolling into the Summer of 2016 with Math and Science!” summer activity packet.

Complete these activities in order. Do them one at a time (with a pencil) and have someone time you for sixty seconds. Stop when the time is up. Correct each page. Use the chart was to keep track of your progress. Look over your work after completing each sheet and notice what your strengths are. Then, notice if you are struggling with any of the facts. Practice those facts before taking the next Mad Minute. Use the chart to help you keep track of your progress. If you practice effectively, you should notice a pattern of continuous improvement!
