Marking Period 3, Part 2

## Learning Experiences by Measurement Topic (MT)

MT

In school, your child will . . .

At home, your child can . . .

Number and Operations - Fractions

- recognize and create equivalent fractions using various models, fraction strips, and number lines (halves, thirds, fourths, sixths, and eighths).

- compare two fractions by creating drawings or models of with the same denominator or numerator using manipulatives such as pattern blocks, Cuisenaire® rods, fraction circles, and fraction strips.

- create number sentences using symbols (<, >, =) to compare fractions with the same denominator or numerators and explain reasoning for results of the comparison.
- create models to compare two fractions with different size wholes.

- find examples of food that are divided into equal parts (pizza, chocolate bar, graham crackers, orange slices). Represent the item by drawing a bar model.  
Example: If you have a pizza divided into eighths, draw a bar model that is also divided in eighths). Create and explain equivalent fractions using the bar model (e.g.:  $\frac{2}{8}$  of the bar model is equal to  $\frac{1}{4}$ ).

- create two models of fractions with the same denominator using paper plates.  
Example: Show  $\frac{3}{8}$  on one plate and  $\frac{5}{8}$  on the other. Explain how the fractions compare by using the math terms greater than, less than, or equal to.
- find two similar shaped objects that can be divided into halves (an orange and a plum or a book and a box). Show  $\frac{1}{2}$  with each object and compare the halves. Explain if they are the same or not. Repeat this activity with other fractions.
